Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-6221
Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand the customer's point of view. The statement focuses on the difficulty of importing employee training data accurately, linking each record to an employee, accessing related Department information, and securing records according to user roles.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator managing employee training records.	Securely import, relate, view, and edit Employee Training records.	Training data comes from Excel, employees must be correctly linked, and different users need different access levels.	The solution needs Import Sets and Transform Maps for reliable data loading, an Employee reference field with dot-walking for related details, and role-based ACLs for access control.	Concerned about inaccurate data, incorrect employee relationships, and unauthorized access or modification.

Problem Statement Summary

ServiceNow administrators need a secure and efficient way to import and manage Employee Training records. Training Name, Completion Date, Status, and Employee information should be imported accurately using Import Sets and Transform Maps. The Employee reference should allow related Department information to be accessed through dot-walking. Role-based ACLs should ensure that authorized HR users can view and edit records while unauthorized users cannot access the table.
