Empathy Map

Date	29 September 2026
Team ID	SWTID-2026-6221
Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand the ServiceNow administrator/user from four perspectives — what they Say, Think, Do, and Feel — in relation to importing, managing, and securing Employee Training records. This helps the team build a user-focused data-management and access-control solution.

SAYS • “Training records should be imported accurately.” • “Only authorized HR users should see and edit the records.” • “Employee details such as Department should be easy to access.”	**THINKS** • “How can I import the Excel training data into ServiceNow?” • “How can I connect each training record to the correct employee?” • “I need to verify that unauthorized users are blocked.”	**FEELS** • Concerned about inaccurate imports and unauthorized access. • Responsible for protecting employee training information. • Confident when data relationships and ACLs are properly configured and tested.
DOES • Creates the Employee Training table and fields in ServiceNow. • Imports Excel data using Import Sets and Transform Maps. • Uses dot-walking and tests Read/Write access by impersonating users.	**PERSONA NAME** **ServiceNow Administrator** (Role / User Type)	**KEY USER NEED** • Accurate Employee Training data. • Easy access to related Employee/Department information. • Role-based Read and Write security.

Empathy Map Summary: The ServiceNow administrator needs accurate imported Employee Training records, clear employee relationships through reference fields and dot-walking, and role-based security so that authorized users can access and modify permitted records while unauthorized users are restricted.
