Ideation Phase

Brainstorm & Idea Prioritization Template

Date	29 September 2026
Team ID	SWTID-2026-6221
Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Different ServiceNow ideas are welcomed and developed into practical solutions for importing, relating, and securing Employee Training records.

Reference: Brainstorm & Idea Prioritization template supplied by the user.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement
ServiceNow administrators need to securely import and manage Employee Training records by linking each training record to an employee, accessing employee details such as Department through dot-walking, and controlling who can view or modify the records using role-based ACLs.

Team Gathering	Goal	Define the Problem
Discuss the Employee Training table, employee reference field, import requirements, user roles and security requirements.	Identify a reliable method to import training data, connect records to employees, display Department information and control access.	Prevent unauthorized users from viewing or modifying Employee Training records while allowing authorized HR users to work with the data.

Step-2: Brainstorm, Idea Listing and Grouping

Generate ideas that could solve the selected problem. The ideas below are grouped according to the main implementation or security approach they support.

Member	Idea / Suggestion	Category	Group
Member 1	Create an Employee Training table with Training Name, Completion Date, Status and Employee fields.	Data Structure	A
Member 2	Import Excel training data using System Import Sets and Load Data.	Data Import	A
Member 3	Use a Transform Map to map imported fields to the Employee Training table.	Data Transformation	A
Member 4	Use the Employee reference field and dot-walking to display Department information.	Related Data	B
Member 5	Create an HR Manager role and control application/module access.	Role-Based Access	B
Member 6	Create Read and Write ACLs and test them by impersonating users.	ACL & Validation	C
Member 1	Configure Status choices so training records use consistent values.	Data Quality	A
Member 2	Verify unauthorized users cannot see or modify protected training records.	Security Validation	C

Group the Ideas

Group A – Import & Data Preparation	Employee Training table + Excel import + Import Sets + Transform Map + Status choices.
Group B – Employee Relationship	Employee reference field + dot-walking + Department information in the list/form.
Group C – Security & Validation	HR Manager role + Read/Write ACLs + impersonation testing + unauthorized-access verification.

Step-3: Idea Prioritization

Prioritize ideas based on how important they are for solving the problem and how feasible they are to implement in the ServiceNow environment.

	Importance			
High	**Group A** **Import & Transform**	**Group C** **ACL Security**		
Medium	**Group B** **Dot-Walking**	**Impersonation** **Validation**		

Low				
	Low	**Medium**	**High**	**Very High**

Group	Idea	Importance	Feasibility	Priority	Selected
A	Excel import using Import Sets and Transform Maps.	High	High	1	Yes
B	Employee reference with dot-walking to Department.	High	High	2	Yes
C	Role-based ACLs with impersonation testing.	High	High	3	Yes

Final Selected Concept
Implement an Employee Training data-management solution in ServiceNow using an Employee Training table, Excel-based Import Sets and Transform Maps for data loading, an Employee reference field with dot-walking to access Department information, and an HR Manager role with Read and Write ACLs. Validate the security configuration through user impersonation so authorized users can access and edit records while unauthorized users are restricted.
