Customer Journey Map

The journey maps the ServiceNow administrator/user experience stage-by-stage, including actions, touchpoints, thoughts, feelings, ownership and opportunities for improving accurate data import, employee relationships and secure access.

Phase of Journey	Stage 1 Data Preparation & Access	Stage 2 Import & Relationship	Stage 3 Secure Operation
Actions *What does the customer do?*	• Logs in • Prepares Excel training data • Opens System Import Sets	• Uploads the file • Runs Transform Map • Checks Employee reference and Department	• Opens Employee Training records • Views/edits permitted records • Receives access result
Touchpoint *What part of the service do they interact with?*	• Login • Application Navigator • Load Data	• Import Set • Transform Map • Employee reference • Dot-walking	• Employee Training list/form • HR Manager role • Read/Write ACLs • Impersonation
Customer Thought *What is the customer thinking?*	• “Is my Excel data ready?” • “Where do I load the file?”	• “Did the fields map correctly?” • “Is the employee linked correctly?” • “Can I see Department?”	• “Does my role allow this?” • “I should only see and edit what I am authorized to use.”
Customer Feeling *What is the customer feeling?*	Interested and cautious about data preparation.	Confident when the import and employee relationship are correct; concerned if mapping fails.	Confident when access matches the assigned role; frustrated if unexpectedly denied.
Process Ownership *Who is in the lead on this?*	ServiceNow administrator / data preparer	ServiceNow administrator / import configuration owner	ServiceNow security administrator / HR Manager role owner
Opportunities *How can we improve this stage?*	• Clear Excel template • Clear navigation • Consistent field names	• Explicit field mappings • Validate Employee references • Use dot-walking for Department	• Explicit ACL conditions • Separate roles • Test with impersonation • Document expected outcomes
