Problem-Solution Fit

Date	29 September 2026
Team ID	SWTID-2026-6221
Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure the proposed Employee Training solution addresses data-import problems, employee relationship needs, reporting needs, and access-control requirements.

1. CUSTOMER SEGMENT(S) [CS]	6. CUSTOMER LIMITATIONS [CL]	5. AVAILABLE SOLUTIONS PROS & CONS [AS]
• ServiceNow administrators • HR Manager / authorized staff • Employee training record managers	• Different users need different permissions • Spreadsheet data can contain inconsistent or incorrect values • Access must be controlled server-side	• Manual entry — simple, but time-consuming • Spreadsheet-only storage — easy to edit, but weak access control • ServiceNow Import Sets + ACLs — integrates data import with platform security
2. PROBLEMS / PAINS + ITS FREQUENCY [PR]	**9. PROBLEM ROOT / CAUSE [RC]**	**7. BEHAVIOR + ITS INTENSITY [BE]**
• Manual training-data entry • Incorrect employee linkage • Difficult access control **Frequency:** whenever training records are imported or accessed	• Training data originates in Excel • Employee is a related user record • Different users have different access needs • Broad permissions can expose records	• Users prepare/import training data • They view or edit Employee Training records • Administrators configure and test access **Intensity:** high during import and security testing
3. TRIGGERS TO ACT [TR]	**10. YOUR SOLUTION [SL]**	**8. CHANNELS OF BEHAVIOR [CH]**
• Need to import training records • New employee/training data • Need for Department-based reporting • Security or access requirement	Employee Training solution: • Import Set → load Excel data • Transform Map → map fields • Employee reference → link user • Dot-walking → Department • HR Manager Read/Write ACLs • Impersonation → verify access	**ONLINE** • ServiceNow web UI • Lists and forms • System Import Sets **ADMIN/TESTING** • Role configuration • Impersonation and review
4. EMOTIONS BEFORE / AFTER [EM]		
Before: Concerned about incorrect imports, broken employee relationships and unauthorized access. After: More confident when imported data, related employee information and ACL permissions are correctly verified.		

Fit Summary: The proposed solution connects the Employee Training data-import problem to ServiceNow Import Sets and Transform Maps, employee reference relationships and dot-walking, and role-based Read/Write ACLs. This provides a single workflow for importing, relating, reporting and securing training records.
