Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-6221
Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed solution manages Employee Training records in ServiceNow using Import Sets, Transform Maps, reference fields, dot-walking and role-based ACLs. It addresses accurate data loading, employee relationships, and controlled record access.

Project Overview	
Objective	Implement a secure and efficient ServiceNow Employee Training solution that imports training data, links each record to an employee, exposes related Department information through dot-walking, and controls access through roles and ACLs.
Scope	Create the Employee Training table, load Excel data through Import Sets and Transform Maps, configure Employee reference and Department dot-walking, then create and test HR Manager Read/Write ACLs.
Problem Statement	Employee training information comes from external spreadsheet data and must be accurately linked to employees. Different users may require different levels of access, so unrestricted access can expose or modify records.
Impact	A controlled solution improves data consistency, makes employee-related reporting easier, and restricts unauthorized viewing or modification of training records.
Proposed Solution	Use an Employee reference field to link records to sys_user, use dot-walking to access Department, and apply role-based Read/Write ACLs to the Employee Training table.
Approach	Create the custom Employee Training table; import Training Name, Completion Date, Status and Employee; map fields with a Transform Map; configure an HR Manager role; create Read and Write ACLs; validate through impersonation.
Key Features	• Excel data import • Employee reference relationship • Department dot-walking • HR Manager role • Read and Write ACLs • Impersonation-based verification

Access & Data Management Model

Function	Configuration	Purpose
Data Import	Import Set + Transform Map	Loads Excel training data into the Employee Training table.
Employee Link	Employee → sys_user reference	Connects each training record to an employee.
Department	Employee.Department dot-walking	Makes related department information available for reporting/list views.
Read	HR Manager Read ACL	Controls access to Employee Training records for authorized users.
Write	HR Manager Write ACL	Controls modification of permitted training records.
Full Administration	admin / security_admin	Allows administrators to configure and manage the solution.

Resource Requirements

Resource Type	Description	Specification / Allocation
Platform	Application platform	ServiceNow instance
Data	Custom record storage	Employee Training table
Import	Source data and transformation	Excel file, Import Set, Transform Map
Security	Roles and ACLs	HR Manager role, Read ACL, Write ACL
Testing	User access verification	Impersonation of authorized and unauthorized users
