Code-Layout, Readability and Reusability

Date	29 September 2026
Team ID	SWTID-2026-6221
Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the Employee Training ServiceNow solution in terms of configuration structure, readability and reusability. The implementation separates data import, employee relationship, role management and Read/Write ACL permissions.

Configuration Layout Checklist

S.No	Quality Parameter	Description	Followed	Remarks
1	Consistent Structure	Uniform configuration steps are used throughout the project.	Yes	Table, import and security steps follow a clear sequence.
2	Proper Configuration Structure	Import, Transform Map, dot-walking and ACL settings are configured as separate activities.	Yes	Each major function has its own configuration step.
3	Meaningful Names	Field, table and role names reflect their purpose.	Yes	Employee Training, Training Name, Completion Date, Status, Employee and HR Manager are descriptive.
4	Clear Platform Elements	ServiceNow features are used according to their purpose.	Yes	Import Sets handle loading, Transform Maps handle mapping, reference fields handle relationships, and ACLs handle access.
5	Documentation	Configuration decisions and testing steps are documented.	Yes	Project content includes detailed milestone activities.
6	Modular Design	Data import, relationship, role and ACL security are separated.	Yes	The project is divided into milestones and activities.
7	No Redundant Configuration	Only required fields and access rules are specified.	Yes	The solution focuses on the four required training fields and documented ACLs.
8	Validation	Access decisions are verified using impersonation.	Yes	Authorized and unauthorized user behavior is tested.

Reusable Components / Modules

S.No	Component / Module Name	Technology	Where Reused	Reusability Level
1	Excel data import pattern	ServiceNow Import Sets	Other structured spreadsheet-to-ServiceNow data imports.	High
2	Field mapping pattern	Transform Maps	Other custom tables receiving imported source data.	High
3	Reference + dot-walking pattern	ServiceNow Reference / Dot-Walking	Other records requiring related user/department information.	High
4	Role-based ACL pattern	ServiceNow Roles + ACLs	Other custom tables requiring controlled Read/Write access.	High
5	Impersonation verification	ServiceNow Administration	Testing access controls for other users and tables.	High

Overall Configuration Quality Assessment

Aspect	Rating (1-5)	Comments
Configuration Layout & Structure	4	Activities are separated into table, import, mapping, dot-walking, role and ACL steps.

Aspect	Rating (1-5)	Comments
Readability	4	Field and role names are straightforward and project steps are clearly described.
Reusability	5	Import Set, Transform Map, reference, dot-walking and ACL patterns can be adapted to other tables.
Documentation / Comments	4	Core configuration decisions and testing steps are documented.
Overall Score	4.25 / 5	Based on the adapted documented project structure; repository evidence was not provided.
