Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	5 Marks

Coding & Solution

This section documents the implemented ServiceNow Employee Training solution. It uses ServiceNow table configuration, Import Sets, Transform Maps, reference fields, dot-walking, roles and ACLs to support accurate data management and controlled access.

Solution Summary

Field	Details
Repository Link / URL	Not provided in the project content.
Programming Language(s)	ServiceNow configuration; no custom programming language is required for the documented import workflow. ACL configuration is performed within the ServiceNow platform.
Framework(s) Used	ServiceNow platform, System Import Sets, Transform Maps, ACL engine and platform reference fields.
Key Features Implemented	Custom Employee Training table; Training Name, Completion Date, Status and Employee fields; Excel import; Transform Map; Employee reference; Department dot-walking; HR Manager role; Read and Write ACLs; impersonation testing.
Pending / Incomplete Features	No pending feature is specified in the project content.
Setup / Run Instructions	Create Employee Training table → add fields → configure Status choices → prepare Excel file → Load Data through System Import Sets → create Transform Map and field maps → transform → configure Employee reference and Department dot-walking → create HR Manager role and ACLs → impersonate users and verify permissions.

Core ACL Configuration

Documented access model: Create a Read ACL and a Write ACL for the Employee Training table and assign the HR Manager role. Use user impersonation to verify that the authorized user can see and edit records while another user cannot access the table as configured.

Configuration	Purpose	Implementation Status
Employee Training Read ACL	Controls Read access to Employee Training records for the HR Manager role.	Done / documented
Employee Training Write ACL	Controls Write/edit access for the HR Manager role.	Done / documented
HR Manager Role	Provides the required role for authorized access.	Done / documented
Impersonation Testing	Validates authorized and unauthorized user behavior.	Done / documented

Code / Configuration Quality Checklist

S.No	Criteria	Status	Remarks
1	Configuration is modular and separated by function	Yes	Table, import, relationship and ACL configuration are handled as separate steps.
2	Meaningful field and role names are used	Yes	Training Name, Completion Date, Status, Employee and HR Manager clearly describe their purpose.
3	Configuration includes documentation where necessary	Yes	Project steps document table creation, import, mapping, dot-walking and ACL testing.
4	Error handling is implemented for critical operations	N/A	No custom exception-handling code is specified in the project content.

S.No	Criteria	Status	Remarks
5	The application runs without critical errors	To be verified in instance	Testing is performed through ServiceNow impersonation.
6	Code is committed to a version control repository	Not specified	No repository evidence is provided.
