Performance Testing

Date	29 September 2026
Team ID	SWTID-2026-6221
Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	5 Marks

Performance Testing

Performance testing for this project focuses on how the ServiceNow Employee Training solution behaves during repeated data access, import-related processing and ACL evaluation. The supplied project material documents functional access verification; formal load/stress measurements are not provided.

Step 1: Testing Overview

Field	Details
Testing Tool Used	ServiceNow instance / browser-based testing. No external load-testing tool is specified in the project content.
Type of Testing	Functional access-performance observation and repeated access testing; formal load/stress measurements are not provided.
Target Module / API	Employee Training table — Read and Write ACL evaluation, with Import Set / Transform Map processing.
Test Environment	ServiceNow hosted instance / training environment.
Test Date	29 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Repeated READ access to Employee Training records using an authorized HR Manager user.	1	60	Authorized records load successfully and permitted access remains available.
2	Repeated READ access using a user without the HR Manager role.	1	60	Access is denied consistently according to the configured ACL.
3	Repeated Read/Write operations using authorized and unauthorized users.	1	120	Each operation is allowed only when the required role/ACL permission is present.
4	Repeated administrator access to the Employee Training table.	1	60	Administrator retains configured administrative access.

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status	Remarks
1	Response Time (Avg)	< 2 seconds	Not measured	Pending	No performance measurement tool/result supplied.
2	Response Time (Max)	< 5 seconds	Not measured	Pending	Requires measured load-test data.
3	Throughput (Req/sec)	To be measured	Not measured	Pending	Requires a performance testing tool.
4	Error Rate	< 1%	Not measured	Pending	Functional ACL verification is documented, but no load-test rate is supplied.
5	CPU Utilization	< 80%	Not measured	Pending	Requires server/environment monitoring data.
6	Memory Utilization	< 80%	Not measured	Pending	Requires server/environment monitoring data.

Step 4: Observations & Analysis

Key Findings	The project demonstrates Employee Training access verification through user impersonation and Read/Write operation checks. Formal performance measurements are not provided.
Bottlenecks Identified	No measured performance bottleneck is identified from the supplied project material.
Optimization Steps Taken	The access model uses a focused role check for the HR Manager ACLs and separates Read and Write permissions into individual ACLs. Import and transformation activities are also separated into Import Sets and Transform Maps.

Step 5: Screenshots / Evidence

Functional ACL Evidence	ServiceNow impersonation/list/form verification can be attached separately to demonstrate authorized and unauthorized Employee Training access.
Performance Testing Evidence	No JMeter, Locust, k6 or equivalent performance screenshots were supplied with the project content.
