Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-6221
Project Name	Importing & Securing Employee Training Data in ServiceNow
Maximum Marks	1 Mark

Scalability & Future Plan:

The plan follows the uploaded template's focus on larger user bases, increased data loads, extended features and a future roadmap, adapted to the Employee Training import and ACL solution.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	The solution currently focuses on the Employee Training table and the documented Training/Employee fields.	Additional training modules or related tables require additional configuration and ACL planning.	Medium
2	Access is represented by the HR Manager role with Read/Write ACLs.	Larger organizations may require more structured role/group administration.	Medium
3	Verification is based on manual impersonation and list/form checks.	Large configuration changes require more systematic regression testing.	Medium
4	Formal performance/load-test measurements are not part of the documented workflow.	Response-time behavior should be measured if data volume grows significantly.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	HR Manager role and users are managed in ServiceNow.	Use structured role/group administration and standardize access assignment for larger user populations.
2	Data Storage	Records are stored in the Employee Training custom table.	Extend the data model with additional fields/tables only when required and maintain appropriate ACLs.
3	Data Import	Excel data is loaded through Import Sets and Transform Maps.	Standardize import templates, mappings and validation for larger or recurring imports.
4	Performance	ACL checks and record operations are evaluated by ServiceNow.	Measure response time and query behavior after significant data growth; review ACL conditions/list configurations if needed.
5	Security	HR Manager role controls documented Read/Write access.	Expand to group-based access, standardized role hierarchy and regression/security test cases for new rules.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Extend Employee Training access and reporting to additional HR/training roles or related business units.	Next iteration	Broader role-based coverage.
Phase 2	Standardize role/group-based access administration.	Future sprint	Simpler permission maintenance as users increase.
Phase 3	Automated regression tests for import, dot-walking and ACL scenarios.	Future sprint	More consistent verification after configuration changes.
Phase 4	Security monitoring and audit-oriented reporting for training record access.	Long-term	Improved visibility into access decisions and changes.
